

## CLIMATE CHANGE

*Climate change is a global emergency, we must take action.*

- We must commit to 100% renewable energy and invest in union-protected green jobs by 2040 and not approve further development on fossil fuel, coal, fracking, and other dangerous greenhouse gasses.
- We must align our efforts to tackle climate change with environmental justice. Violations will be met with strict enforcement.
- Wildfires result from an ongoing drought reality that Oregon has failed to respond to adequately. There needs to be a commission created to adequately address these issues. We must re-allocate state funds to ensure wildfire response and recovery have all resources necessary to tackle the ever-growing wildfire season.
- We must continue to fund resources for low-income Oregonians to receive air filters and air filter systems.
- We need a wildfire survivor relocation program between state agencies, American Red Cross, and the National Guard will be created to respond immediately. We will evaluate our current response time and resources to determine the amount of stock, contracts, and resources we need for safety and individual needs.

- Land use solutions need to be created as trying to sustain ranches and lifestyles in locations that are becoming uninhabitable is illogical.
- We need better temporary evacuation sites and supplies.
